Subject: AF - Griffiss PFOA/PFOS Calculations

Hi Bob,

We looked at the AF calculations that utilized a dermal exposure pathway for calculating the soil screening level. We understand that the OW toxicity assessment is still underway so we relied on the existing OSWER directive for subchronic values. The evaluation of dermal exposures is not supported based on Agency guidance. It appears that the AF utilized a default value that is not supported by Superfund for this chemical.

I'm reviewing the remainder of the document and will get back to you on Monday.

Thanks.

Marian
